PROFILE

Data Analyst with 3+ years at Jaldimai Foods, a food-delivery marketplace serving Damak and Birtamode, Nepal. Turns order, customer, delivery, and partner data into decisions using SQL, Python, Excel, Power BI, Tableau, and Databricks. Built the company's 12-tab Excel sales management system and the KPI reporting cadence used across two service areas, and ships end-to-end analytics projects on Databricks, PostgreSQL, and Excel.

CORE SKILLS

Operations	Marketplace operations · restaurant and vendor management · rider coordination · delivery-zone pricing · customer escalations · SOPs
Analytics	SQL (PostgreSQL, MySQL) · Python (Pandas, NumPy) · Excel (Power Query, Power Pivot, DAX) · Power BI · Tableau
Databricks	Databricks SQL · Apache Spark · Unity Catalog · Delta Lake · AI Functions (ai_parse_document, ai_classify, ai_extract) · dashboards
Data	Data modeling · data-quality checks · KPI design · cohort and RFM analysis · dashboard design · metric definitions · anonymization

EXPERIENCE

Manager & Data Analyst

2023 - Present · 3 years

Jaldimai Foods, Damak & Birtamode, Jhapa, Nepal

- Ran daily marketplace operations across two service areas: order monitoring, rider allocation, restaurant partner support, delivery escalations, and end-of-day performance reviews.
- Built and maintained a 12-tab Excel sales management system (Sales Entry, Sales_Data, Order Summary, Dashboard, Reports, and branch/restaurant/menu/price masters) that replaced scattered order logs with one auditable source of truth.
- Defined and reported the core KPI set: orders, sales/GMV, average order value, items per order, repeat customers, cancellation rate, delivery time, on-time delivery, partner ratings, and delivery revenue.
- Analysed order, customer, restaurant, delivery, payment, and review data in SQL and Python to identify peak demand windows, high-delay zones, retention gaps, and underperforming partners.
- Produced weekly and monthly management reports and dashboards; automated recurring reporting and ran data-quality checks for blanks, duplicates, price mismatches, and order-status exceptions.
- Supported 50+ restaurant partners with onboarding, menu and pricing updates, order-acceptance issues, and performance scorecards.
- Analysed delivery pricing and rider coverage against the Rs 20/km, Rs 50 minimum, Rs 300 maximum structure; recommended zone and peak-hour adjustments.
- Turned customer feedback and late-night ordering patterns into menu, promotion, and service recommendations; contributed demand and partner-supply research for the planned Itahari expansion.
- Maintained metric definitions and anonymised datasets so sales, platform revenue, and profit were reported separately.

SELECTED PROJECTS

Jaldimai Foods: Sales & Operations Analytics

Excel · PivotTables · Data Model · Data Quality

Designed a 12-tab sales management system for a two-branch food-delivery business. Centralized order capture, menu and price masters, branch dashboards, order summaries, and management reports, with KPI views for sales, orders, items sold, AOV, and branch performance.

US Emissions Analytics Dashboard, Databricks

Databricks SQL · Dashboards · Data Visualization

Built an interactive Databricks SQL dashboard on 2023 EPA emissions data. Queried county- and state-level GHG emissions, calculated emissions per person, ranked the top 10 states and counties, and combined symbol map, scatter, pie, and bar visuals into one environmental view.

Document Intelligence Pipeline, Databricks AI

Databricks · AI Functions · Unity Catalog

Built a pipeline that parses invoices, purchase orders, and receipts with ai_parse_document, classifies each document with ai_classify, and extracts vendor, date, and total fields with ai_extract into Unity Catalog tables for finance reporting.

Retail Lakehouse 360: H&M Analytics

PostgreSQL · SQL · Data Modeling · Data Quality

Built a bronze, silver, and gold PostgreSQL pipeline over 31M+ H&M transaction rows. Designed schemas, cleaned and deduplicated raw data, documented assumptions, and produced analytics-ready gold tables for customer and product analysis.

Olist E-Commerce Analysis

Excel · Power Query · Data Model

Analyzed 99,441 orders across 9 related datasets in a 32-sheet workbook with 6 Data Model relationships; identified a 3% repeat-purchase rate and quantified the retention opportunity.

Sales Performance Dashboard, 2018 to 2021

Excel · PivotTables · DAX

Analyzed $5.33M in revenue across 8,888 order lines; traced $292.8K in profit losses to discounting above 40% and recommended a discount cap.

EDUCATION

Bachelor of Science in Computer Science

2020 - 2024

Nepal · Coursework: Data Structures, Algorithms, Database Systems, Statistics · Capstone: data-driven decision making.

CERTIFICATIONS

- Introduction to SQL
- Python
- Excel

Additional training: PostgreSQL, MySQL, Power BI, Tableau, Databricks, Spark, and applied analytics projects.

TOOLS & TECHNOLOGIES

Data	PostgreSQL · MySQL · Pandas · NumPy · Matplotlib · Seaborn
Databricks	Databricks SQL · Apache Spark · Unity Catalog · Delta Lake · Databricks AI Functions
BI & Excel	Power BI · Tableau · Power Query · Power Pivot · DAX · PivotTables · Excel Data Model
Workflow	Git · GitHub · Jupyter Notebook · VS Code · Excel Macros · data-quality documentation
